Key Features

Secure your confidential data: XLSafe PRO files employ an innovative security system which protects the contents of your spreadsheets from unauthorised use and unauthorised access. Your Microsoft ® EXCEL spreadsheets will remain protected when your files get stolen, lost or transmitted to other computers either accidentally or intentionally.

Protection against password recovery software: XLSafe PRO files are strongly protected against password recovery software and other third party intrusion tools. This is achieved through the XLSafe PRO advanced protection platform and security algorithms.

Ability to specify 'safe' computers: When you purchase a multiple license version of XLSafe PRO you have the ability to authorise specific computers which can open the protected spreadsheets without going through the activation process.

Restrict distribution of spreadsheets: You can distribute your protected files to their intended users without worrying that these users will pass on your spreadsheets to other third parties. This can be achieved through:

- using the key generator to create activation keys
- using the online activation server of DataSafeXL
- using an XLSafe PRO password

Protect spreadsheet structure: With XLSafe, you can easily maintain the design of your spreadsheets and protect it from accidental or intentional changes. Your spreadsheets can also be constructed in accordance with the [Sarbanes Oxley requirements](#).

Hide and secure formulae/ cell contents: You can protect/ hide the contents of cells containing formulae, text labels and constant values with a click of a button. You can also easily specify input cells and leave them unprotected based on their cell colour.

Hardware activation: XLSafe PRO files employ a pioneering activation system to recognise whether a computer is authorised to open a spreadsheet based on its hardware configuration. In this way, you are re-assured that only intended users will have access to your files.

Time expiration capabilities: XLSafe PRO files employ an advanced protection system which prevents back-dating of system clock settings. For each XLSafe PRO file you can choose to set:

- a specific expiry date
- a trial period after activation on a user's machine
- a subscription period after which a user needs to re-activate the spreadsheet

Stand alone protected files: XLSafe PRO spreadsheets do not require any installation wizards or run-time files and can be easily distributed to their intended users as stand alone files which can have either an ".xls" or ".xlsm" file extension.

Customer customisation: XLSafe PRO can be easily customised with additional VBA procedures and features at clients' request.

Simple installation: XLSafe PRO is compatible with all Microsoft ® Excel versions and Windows platforms. XLSafe PRO can be easily deployed across networked computers when you purchase multiple licenses of our product.
